# Deforestation in India

- Deforestation started with the growth of agriculture, but was exacerbated in the nineteenth century when British commercial forestry operations destroyed forests in mountain areas of Kerala, Tamil Nadu and Karnataka. The Gangetic plains have been almost completely deforested for agriculture.

A photograph of a forested hillside. In the foreground, several young trees are planted in rows, each marked with a vertical white stake. The forest extends into the background, with more trees and some fog or mist visible.

# Afforestation in India

NAP has been the flagship afforestation scheme of the Ministry of Environment, Forest & Climate Change , implemented since year 2000 on pan India basis, for afforestation in identified degraded forest areas with people's participation and decentralised forest governance. GIM activities were started in 2015-16.

# Factors for Afforestation

- 1 Environmental factor
- 2 Vegetation factor
- 3 Human activity factor

# About Us

- This website has been made while keeping in mind the rapid decline in forest area due to rapid industrialization.
- Our goal is to promote the growth of trees so that we can save this dying planet.
- We provide many services which will be elaborated in the latter part of the presentation.

# Services We Provide

- Donations
- Volunteer
- Live satellite tree data
- Live Air quality data
- Events
- A Guide to help you select the most suitable trees to be planted in your area.

**Now we will show you our  
Website**
